Neocor

What are the benefits of using a Decentralized Platform for Software License and Asset Management?

- Improve the trust between the Software Publisher and Licensee, reducing software audits.

- Track delivery and activation status and receive notifications of requests and transfers.

- Prevents unauthorized use of software using cryptography and storing license keys in protected environment.

- Supports virtually any license model from trial, subscription, perpetual, enterprise to per user licensing.

Neocor Fusion Ledger is designed for organizations seeking to improve compliance and governance of software licensing and IT asset management. The system can be easily customized to suit the specific needs of any organization.

Prevent Software Licensing Disputes

Breakthrough Technology

The NeocorBlock Platform is a decentralized application that helps Software Publishers and Enterprises monitor license positions and minimize risks of unauthorized use of software assets. The solution was developed using Solidity for Smart Contracts, on the Ethereum blockchain platform.

What does this mean for the Software Ecosystem?

Unlike other tools available on the market today, using NeocorBlock License terms, entitlements, and use are immutable. There would be fewer audits. Assignment and use records between the parties would be digitally signed, tracked and management on the secure ledger.

How would a decentralized application using blockchain technology solve the problems with traditional licensing

Disruptive solution . A publisher would create an order that runs as a smart contract, causing proof of ownership. Then the licensee would accept the contract and rights and assign use to employees. All three parties would be verified on the ledger. All the transactions and history related to the software license, could be viewed on the ledger

Key Capabilities of the Platform

- Contract repository
- Software Distribution Management
- Hardware & Software Inventory Management
- Automated Software License Compliance Management
- Comprehensive Software Usage Analysis
- Intuitive Dashboards and Intelligent Reporting
- Integration with Configuration Management Systems

About Us

Neocor Holdings is a fast growing software startup based in Silicon Valley. Neocor is paving the way making it possible to solve the challenges of distributing and managing software licenses. The company was founded by a team with extensive experience in enterprise software licensing
